

Industrial Master Plan Suzuki Motors, Lagos, Nigeria

EDESSA was retained by the Boulos Group to prepare an industrial Master plan of a 200,000 m² industrial plot in northern Lagos designed to fit a motorcycle and tricycle assembly plant.

The design had to cater for the current demand of assembly of completely knocked down (CKD) motorcycles and tricycles and the future expansion of the plant.

A detailed space analysis was conducted in order to estimate the areas for each production and warehousing activity.

The design started with logic flow diagrams of the various activities and evolved into scaled Autocad drawings of the entire facility.
