

Sharjah Dumpsites Investigation

In March 2010, EDESSA was retained by **AVERDA Group** and **Bee'ah**, the Sharjah Environment Company to conduct a **preliminary site investigation of five active dumpsites** around the Emirate of Sharjah. Those sites included Khor Fakkhan, Maliha, Al Dhaid, Al Madam and Kalba. The investigation covered a wide range of environmental, health, safety and operational issues for each site.

A detailed factual report was prepared providing a description of ongoing operations as well as environmental, safety and health concerns and impacts. Furthermore, the report provided recommendations for short term and long term corrective actions to mitigate identified impacts on each site.
