

Remediation of Zef-Zef Dumpsite and design of new cell, Skikda, Algeria

EDESSA assisted the Averda Group in the consultancy for the Remediation of Zef-Zef dumpsite and design of a new cell in Algeria.

The project included the preparation of the technical proposal for the dumpsite remediation including the excavation and transfer of 100,000 m³ of wastes existing outside the profile of the dumpsite.

The project also included the design, construction and operation of a biogas flaring system and a leachate collection system.
