

Construction and Operation of Nador Landfill, Morocco

EDESSA assisted the **Averda Group** in the consultancy for the **Construction and Operation of Nador Landfill** in **Morocco**.

We worked on the operation aspects of the current cell and the construction of three new cells and their operation during the contract period. The contract period was envisioned to be 15 years. However, this period could be extended by 5 years potentially expanding the duration of the project to 20 years.

The project also included a biogas flaring system and a leachate collection system.
