

Waste Management Study Caza of Tyre

EDESSA has been commissioned by the Union of Municipalities of Tyre to evaluate the current waste management practices in the Caza of Tyre. The Caza of Tyre groups 56 villages and towns. It relies mainly on dump sites and open burning for waste management. They have received funds for the construction of a waste sorting and composting plant in Ain Baal. They still needed to find a suitable site for the disposal of the residual waste in an engineered landfill. EDESSA conducted a thorough review of proposed sites and recommended the location of the engineered landfill. We also conducted an audit of the waste sorting and composting plant in order to ensure smooth operation once the facility will be put in operation.
